

Mini Doge

WHITEPAPER

www.minidoge.org

INTRODUCTION

In the vast universe, mini Doge is like a bright new star, shining as an arbitrage expert. It is carefully built by a group of passionate and insightful developers to create a new project with both interest and potential, which not only meets the market demand for arbitrage strategies, but also aims to build a dynamic and inclusive meme ecosystem. All this will be carried out on the dynamic BSC chain, and the mini Doge team firmly believes that their efforts will revitalize the BSC chain.

Mini Doge is not only an innovation of traditional cryptocurrency projects, but also a community platform carrying the vision of "dog house". It connects dogecoin enthusiasts, meme project creators and all friends who love encryption culture around the world to explore, create and grow together.

DISCLAIMER

The mini Doge project, including its tokens, websites, smart contracts and apps, is fully decentralized and community driven and is not registered as a financial or payment service in any jurisdiction. The terminology in the project is for reference only and is not legally binding. Mini Doge smart contracts are open source and security audited, and tokens are not considered securities, electronic currency, fiat currency or stable currency. This white paper does not constitute a contract or investment invitation, and users are responsible for obtaining appropriate advice before accessing, reading or using mini Doge and its elements, and fully understand the high risk of blockchain and encryption systems. Neither the project nor the community members are responsible for any loss that may be suffered from the use of mini Doge.

01 ABSTRACT

Mini Doge, Born on December 12, 2024, it is a new star in the Web3 universe. It is not only an innovative arbitrage tool, but also a community platform full of the vision of "dog home". Mini Doge is committed to bringing together encryption enthusiasts around the world to explore, create and grow together.

- Mini Doge arbitrage

Flash x, mini Doge's innovative arbitrage mechanism, through precise monitoring, automatic execution and efficient allocation, makes full use of market opportunities to maximize the return on investment of participants. It is not only an arbitrage tool, but also a platform for community vision.

- Mini Doge NFT

In the NFT marketplace, users are allowed to create, buy/auction NFT works and donate to help save stray dogs around the world.

MINIDOGGE

- Mini Doge pledge

In the pledge service sector, users are allowed to pledge various tokens to obtain more income, while donating part of the income to save stray dogs.

- Mini Doge games

In the future, colorful game activities will be launched to immerse everyone in the world of gamfi and enjoy the fun of the game.

- Mini Doge claws

Our roadmap will help users track from arbitrage to NFT, Rewards obtained in the process of pledge, game, etc.

- Mini Doge swap

We will set up commodity stores to provide Mini Doge holders with real-world goods and services while supporting the prosperity of meme ecology.

02 Values

Transparent community: Mini Doge takes community construction as the core of project development, attracts more encryption enthusiasts to join by holding community activities, establishing online communication platforms and providing rich community resources, and jointly builds an open, dynamic and positive community atmosphere.

Arbitrage dog born: the core of mini Doge lies in its innovative arbitrage dog mechanism, which realizes arbitrage on the chain based on the efficient, low-cost and rapid confirmation characteristics of BSC chain, provides stable returns for investors, and promotes the liquidity and efficiency of encrypted currency market.

MINIDOGGE

03 Mini Doge Coin

Full name of Token: MINIDOGGE

Token abbreviation: MINIDOGGE

Token type: BEP-20

Total supply: 1,000,000,000,000,000

The advantages of BSC intelligent chain lie in its security, stability between double chains, compatibility with EVM, and fast and economical on Chain Governance and verification tools. Mini Doge does not assume responsibility for the behavior of coin security intelligent chain network.

04 Flash X

The birth of flash x is an innovation of the traditional cryptocurrency project. It is not only a simple arbitrage tool, but also a community platform carrying the vision of "dog home", which aims to bring together Dog Coin lovers, meme creators and all friends who love encryption culture around the world to explore, create and grow together. Flash X's intelligent arbitrage mechanism makes full use of market opportunities and maximizes the return on investment of participants through precise monitoring, automatic execution and efficient allocation.

Relying on the machine gun pool on AAVE BNB chain chain and the excellent performance of AAVE V3, flash x realizes the second lightning loan operation and efficiently captures market arbitrage opportunities. At the same time, combined with the economic model of flash x, the plate aims to create a sustainable blockchain ecosystem for users. By integrating the flexibility of defi and the security of blockchain, flash x provides users with efficient and reliable arbitrage services.

First of all, we need to understand lightning loans. Lightning loan is an innovative way of lending, and its core advantage is to allow borrowers to complete borrowing and repayment operations within an atomic blockchain transaction without providing funds in advance. That means borrowers can borrow large amounts of money without collateral as long as they can pay off their debts before the deal closes. This feature of flash loan makes it an ideal tool to capture short-term arbitrage opportunities in the market.

What is the lightning dog arbitrage mechanism?

What is the lightning dog arbitrage mechanism?

- **deposit of funds in the machine gun pool:** users first need to deposit funds in the machine gun pool on the AAVE BNB chain. As a smart contract, machine gun pool can automatically manage funds and participate in various financial activities, such as lending, trading and so on.
- **Application for lightning loan by AAVE V3:** users can quickly apply for lightning loan through the high-performance interface of AAVE v3. Due to the optimization of AAVE V3, this process can be completed almost in seconds.
- **Implementation of arbitrage transactions:** after obtaining lightning loan funds, users immediately use these funds for arbitrage transactions. Arbitrage trading may involve buying and selling the same asset on different exchange markets to take advantage of price differences to achieve profits.
- **Repayment and closing transactions:** after the arbitrage transaction is completed, the user quickly pays off the lightning loan debt and closes the transaction. The whole process is completed in an atomic transaction, which ensures the security and indivisibility of the transaction.

What does flash X have to do with minidoge?

Flash x aims to build a sustainable blockchain ecosystem through minidoge distribution mechanism, transaction tax incentives and functional applications. Its design core includes the following aspects:

- **Fixed total supply:** minidoge's total supply is fixed, which ensures the scarcity and value stability of tokens.
- **Cash dividends:** users who hold minidoge will receive cash dividends, which means they can get returns from transaction taxes, fees and other income in the ecosystem.
- **Automatic burning mechanism:** in order to maintain the scarcity of tokens, flash x introduced automatic burning mechanism. At each transaction, a certain proportion of minidoge will be burned automatically, thus reducing the circulation in the market.
- **Practical application scenarios:** Flash x is committed to applying minidoge to practical scenarios, such as payment, games, social networking, etc., in order to expand its scope of use and increase user stickiness.

What are the technical advantages of flash x?

- **Second level operation:** through the high performance of AAVE V3, lightning dog realizes second level lightning loan operation, which greatly improves the arbitrage efficiency.

- **No collateral:** the lightning loan mechanism allows users to borrow without providing collateral, reducing the threshold and cost of arbitrage.
- **Transparency on the chain:** all operations are completed on the block chain to ensure transparency and traceability of transactions.
- **High security:** relying on the security characteristics of the block chain, the lightning dog arbitrage sector can effectively prevent fraud and hacking attacks.

What are the application scenarios for flash x?

Flash x arbitrage plate is suitable for users who want to make profits by taking advantage of short-term arbitrage opportunities in the market. Both individual investors and institutional investors can achieve efficient and safe arbitrage operations through this sector. At the same time, the economic model of flash x also provides users with long-term revenue and value-added opportunities.

The flash x arbitrage sector combines the high-performance of AAVE V3 with the economic model of flash x to provide users with efficient, safe and sustainable arbitrage services. Through the second level lightning loan operation and chain transparency, the sector can effectively capture market arbitrage opportunities and bring stable returns to users. At the same time, the economic

model of flash x also ensures the scarcity of tokens and the long-term returns of holders, providing users with a sustainable blockchain ecosystem.

05 ECOSYSTEM

Mini Doge lab aims to build a decentralized and innovative blockchain ecosystem. Promote the diversified application of tokens and functions through technology driven and community collaboration. Use "flash X" technology to achieve seamless integration of cross chain arbitrage and defi functions, providing users with stable revenue and participation opportunities.

- **Community:** Mini Doge is a decentralized, fun filled and vibrant community, and we embrace different voices and perspectives to build Mini Doge into the best community in encryption while helping dogs in need.
- **Arbitrage:** through the excellent performance of AAVE V3, the second level lightning loan operation is realized to efficiently capture market arbitrage opportunities.
- **Pledge:** allow users to pledge various tokens for more income, while supporting donations to save stray dogs.
- **Games:** in the future, there will be colorful game activities to immerse everyone in gamfi's world.

Phase 1: birth

- **Marketing**
- **The telegraph has 10000 members**
- **Mini Doge born**

Phase 2: crawl

- **Official website online**
- **Mini Doge arbitrage technology is applied online, and the**
- **destruction mechanism is running**
- **KOL marketing**
- **The cable has 50000 members**
- **30000 Mini Doge holders**
- **Third-party audits**
- **Voluntary community+charitable donations**
- **Partnership maintenance**

Phase 3: walking

- **Market value management team launches**
- **Token pledge launched**
- **Yield farming goes live**
- **Mini Doge holds 100000 people**
- **The telegraph had 100000 members**
- **Community airdrop**
- **Marketing by big marketers**
- **Project listing**
- **More community Emoji packs**

Phase 4: Operation

- **Mini Doge holds 150000 people**
- **Increase marketing efforts**
- **More Emoji pack ads**
- **Update and revision of official website**

Phase 5: Jump

- **MMini Doge holds 300000 people**

- **Release NFT**
- **Develop dapps based on mini labs (such as mini games or social platforms)**
- **Expand application scenarios (payment, donation, in game currency, etc.)**
- **Market value donations (like \$250000 to community selected charities)**

Phase 6: going to the moon

- **Minidoge eco app covers 100+countries**
- **Global service reaches 1 million+users**
- **Cooperate with more well-known institutions around the world**
- **Donate to build dog house**
- **Mini Doge holders spread around the world**
- **Make the BSC chain really great again**
- **Global users gather to hold Dao community gatherings**
- **Support Mini Doge integration into other blockchain ecosystems**
- **Working with more defi protocols**

08 TOKENOMICS & STATS

MiniMinidoge's innovative distribution mechanism, transaction tax incentives and functional applications jointly build a sustainable blockchain ecosystem. Its design core includes fixed total supply, cash dividend, automatic combustion mechanism and practical application scenarios to ensure the scarcity of tokens and the long-term returns of holders.

- **Innovation and Sustainability: Flash X's economic model creates an ecosystem of scarcity and holder returns through fixed supply, trading dividends and combustion mechanisms. At the same time, combined with cross chain arbitrage and defi functions, it creates practical application scenarios for tokens to ensure the long-term development potential of the project.**
- **Win-win model between coin holders and ecosystem: Flash X actively participates in ecological construction while allowing coin holders to enjoy passive returns through dynamic dividend and pledge reward mechanism. Transaction fees are partly used for dividends, liquidity replenishment and token combustion, which not only ensures market stability, but also improves the value of tokens.**
- **Future economic model of enabling blockchain: the economic model of flash x integrates innovative arbitrage technology and DDO governance, which not only enhances the sense of community participation, but also promotes the multi scenario application of tokens in NFT, defi and payment fields, creating more possibilities for the blockchain economy.**
